

AMENDMENTS TO THE SPECIFICATION

Please replace the second paragraph on page 14, beginning on line 6, with the following paragraph:

Since the piston rods are each formed with a ~~the~~ first oil passage, which communicates with the front chamber, and a ~~the~~ second oil passage, which communicates with the rear chamber, the hydraulic hoses connecting the respective oil passages to the first and second oil ports of the rotary ~~rotary~~ joint are always covered by the movable bracket. Thus, the hoses will never be caught on objects to be dismantled or otherwise get in the way of dismantling work. They will never be damaged either.
